

# Production Air Tools & Accessories

Ontario's Largest  
Pneumatic & Hydraulic Tool Distributor

1-2430 Lucknow Drive, Mississauga, Ontario L5S 1V3. Tel: 905-672-5557 Fax: 905-672-5559  
Email: sales@dobcoeqp.com [www.dobcoeqp.com](http://www.dobcoeqp.com)

**BOSCH**

Invented for life

## Quality By Design

Sturdy construction, highest quality materials and intense quality control of every Bosch production tool insures product reliability. Our CLE·A·N-tools make oilers and related oiler maintenance obsolete. Reduced air consumption and easy servicing are always a design factor; this helps reduce energy and maintenance costs for the end user. Excellent ergonomics coupled with the high speed of Bosch tools reduce assembly cycle time and optimize work flow.

## Environmentally-Friendly Design

Protection of the environment is always a consideration when designing and manufacturing Bosch production tools. From design to production to packaging, environmentally-friendly and energy-saving steps are in place to insure we do everything possible to renew our resources.

### Conformity

All air tools listed in this catalog conform to the following standards or standard documentation:  
EN 792, EN 50144 (in accordance with standard regulation 392/EWG).

Certified in  
accordance  
with ISO 9001

Certificate no. FM 30078

# Bosch Air Tools: The Perfect Combination of Form and Function

**DOBCO**  
EQUIPMENT LTD

- C** Consumption optimized
- L** Lubrication free
- E** Ergonomic
- A** Air tool
- N** Noise reduction

## Bosch C·L·E·A·N Technology: What is it, and what are the advantages?

C·L·E·A·N is actually an acronym that denotes several technical features of part of our range of air tools and air motors. C·L·E·A·N technology protects the workpiece, the tool user and the environment by eliminating the need for automatic oilers, reducing air consumption and reducing tool noise. C·L·E·A·N motors NEVER need oil, but are not affected by existing oilers in a facility! C·L·E·A·N technology reduces tool air consumption by up to 30%, (reducing facility energy costs) and reduces tool noise by several decibels depending on application. Look for the C·L·E·A·N symbol in this catalog; it will save you money, energy and repair time while reducing worker complaints based on noise and air pollution in the workplace.

## The Many Benefits of Bosch Ergonomic Design

Bosch Air Tools fit perfectly into most any hand. They are lightweight, quiet and run smooth. Our polyamide (fiberglass-reinforced plastic) housing effectively insulates against temperature extremes produced by the air motor, provides maximum grip comfort and is light, rigid & virtually indestructible. Polyamide is used in many of our products; some straight and angle drivers may use other materials. Polyamide saves as much as 40% of total tool housing weight, giving our tools an excellent power to weight ratio. You'll be amazed at how light and comfortable our tools feel in your hand.

## Bosch Design Reduces Your Spare Part Inventory

Controlling maintenance costs is important in today's competitive production environment. It's important to Bosch to produce tools that help you do just that. Our tools are designed to provide years of trouble-free service, but eventually, air motors can wear or tool damage may occur during use. We design our tools by family; they share many of the same air motors, housings and clutches across a wide range of tools. Our shut-off, cushion and S-plus clutches share many of the same parts, and even our housings are used across several applications. A T-grip drill may share the same housing with a T-grip shut-off driver; a 1/4 horsepower C·L·E·A·N air motor is used in many applications of straight drivers, angle nutrunners and drills. The more common parts we use in design, the more your total operating costs are reduced over the life of the tools.

## Bosch Air Tools Provide Many Distinct Advantages:

Bosch production tools stand out for their progressive technology, excellent ergonomic design and quality workmanship. Bosch air tools are versatile, efficient and reliable.

- C·L·E·A·N tools protect the workpiece, the user and the environment while reducing noise and air consumption.
- Production air motors run cool: The expanding compressed air eliminates motor overheating and burn out.
- Air motors don't produce sparks and are ideal for use in damp areas.
- Polyamide housings insulate against temperature extremes, provide maximum grip comfort and are light, rigid & virtually indestructible.
- Bosch tools share many of the same air motors, housings and clutches and are easy to maintain and repair.
- Bosch impulse and impact tools provide minimal torque reaction to the user.
- Precise shut-off clutches guarantee accurate, repeatable torque control for hard and soft joints alike.
- Ratcheting cushion clutches and our patented S-plus clutches handle a wide range of prevailing torque fasteners with ease.

# Bosch Clutches: The Right Accuracy for Any Fastening Application

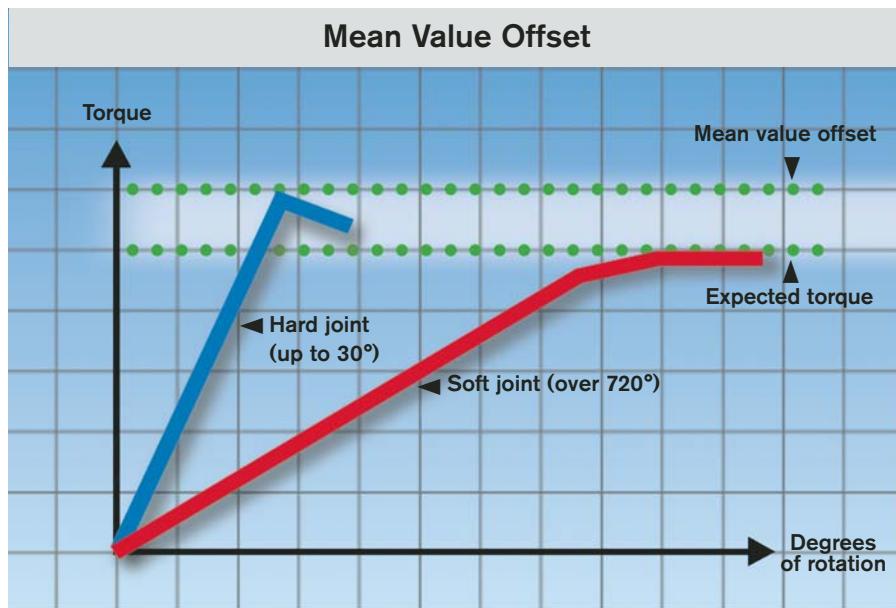

## Bosch Automatic Shut-Off Clutch Features

Our shut-off clutch is designed to minimize user influence on the fastening process. Bosch shut-off clutches are among the worlds' best in providing excellent repeatability & accuracy; they are ideal for fastening applications where torque accuracy is critical. Our repeatability rivals that of some DC-feedback tools costing thousands more than comparable Bosch air-driven tools.

### A Proven Performer

The patented Bosch shut-off clutch has been used in hundreds of applications over the years and is a proven performer in many real-world production environments. Our patented ball & detent design is virtually wear-free; the clutch will last for millions of fastening cycles before it must be replaced.

The tool runs until the shut-off clutch disables the air motor by closing the air inlet valve. The tool runs again when the operator releases the trigger or moves to the next fastener (some push start models do not require a trigger).

### Precise, Accurate Shut-Off

Our Shut-off clutch ensures high torque repeatability and accuracy. Whether in a hard joint application of 30 degrees or a soft joint of 720 degrees, the clutch guarantees an extremely low mean value offset and consistent torque. Clutch quality conforms to ISO 5393 requirements.

### Precise and Stable Under Load

Bosch quality testing for our shut-off clutch is extremely rigorous. Each version of air tool with a shut-off clutch must survive a one million (1,000,000) cycle test under load without failure or excessive adjustment during development. All ball & detent-type Bosch clutches (shut-off, cushion & S-plus) provide 15% greater torque in reverse for removing fasteners. Precise adjustment is done with a special wrench. Modular design means fewer parts can cover several ranges & types of clutch.

### Ratcheting Cushion Clutch Features

The Bosch ratcheting cushion clutch shares many parts with the shut-off clutch; in principle, it works exactly the same as our shut-off clutch, but does not turn off the air motor of the tool when desired torque is reached. As a result, the tool ratchets on a cushion of clutch balls until the operator releases the trigger. It's great for soft joints or prevailing torque fasteners such as wood, sheet metal and self-tapping screws and provides good torque accuracy. The user can have a slight influence on final torque by allowing the clutch to ratchet for a longer period of time.

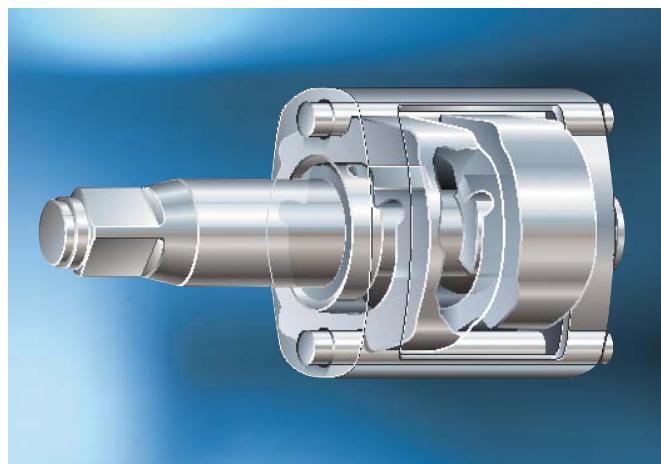

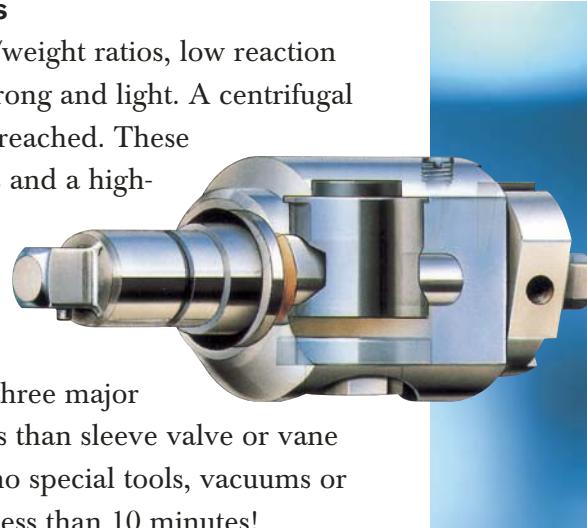

### S-Plus Combination Clutch Features

The Bosch S-Plus combo clutch is unique in the fastening industry. It is ideal for prevailing torque fasteners where start torque exceeds seat torque, such as a self-tapping screw. It combines the function of a shut-off and ratcheting cushion clutch into one clutch; this is done by installing a bypass valve on a standard shut-off clutch to allow the air motor to run when desired. An example would be a self-tapping screw in thick plastic: the initial torque needed to get the screw started is higher than desired final seat torque. The user can bypass the shut-off clutch and allow it to perform as a ratcheting cushion type until the threads are cut. Once the screw begins to spin freely, the bypass lever is released and the clutch becomes a shut-off type!

### T-Grip Impulse Wrench (With Shut-Off Function) Features

Bosch T-Grip impulse wrenches offer excellent performance/weight ratios, low reaction speed and low noise. A Polyamide housing makes the tool strong and light. A centrifugal shut-off mechanism shuts off the tool when desired torque is reached. These tools provide a more accurate alternative to impact wrenches and a higher-rpm alternative to shut-off clutch tools.

Bosch impulse wrenches are especially compact thanks to a patented impulse method of piston compression in a bath of hydraulic oil. The impulse mechanism from Bosch has only three major moving parts which increase longevity and resist higher loads than sleeve valve or vane type impulse mechanisms. Bosch impulse wrenches require no special tools, vacuums or syringes for service, and a typical oil change can be done in less than 10 minutes!

### Impact Wrenches

Bosch production impact wrenches are ideal for large fasteners with low torque accuracy and high rpm demands. They tighten the fastener using rotary impact pulses in a pin-type impact unit. High-alloy materials insure long life and minimal service demand.

# Choosing the Proper Tool for a Specific Fastener & Joint

**Torque accuracy is dependent on finding the right driver for the desired fastener and type of joint (hard or soft).**

The perfect torque for a fastener and joint is dependent on the type of application. Joints are referred to as “hard” or “soft”, depending on the material being secured. Hard joints are typically very repeatable; soft joints will produce a lower acceptable torque value for the same fastener since the joint crushes more as it is tightened. Torque deviation rises in soft joints. It’s impossible to account for all fastening scenarios in a catalog; there are too many possible variables in the fastening process. Always verify tool application to a joint with an actual test using torque measuring equipment and the actual joint. This chart gives an overview of the potential benefits & torque accuracy of each type of driver/clutch with various fastening applications.

**Clutch Torque Accuracy/Repeatability**

Joint types (from hardest to softest)	Fastener rotation in degrees	Screwdrivers with automatic shut-off clutches for high, uniform torque accuracy.	Screwdrivers with ratcheting cushion clutch for normal joints with moderate torque accuracy.	Impulse wrenches feature low reaction torque, but with high torque accuracy.	Impact wrench- es for high torque with restricted tolerance accuracy.	Direct drive for joints with low torque accuracy. Maximum torque is reached when the motor is stalled.
	Hard joint: up to 30° rotation	Very good clutch performance	Satisfactory clutch perfor- mance	Satisfactory clutch per- formance	Satisfactory depending on required torque accuracy	Low
	Hard joint: up to 60° rotation	Very good to good clutch performance	Satisfactory	Satisfactory	Low	Low
	Medium joint: over 60° rotation	Good if shut-off function is still working correctly (and not shutting off too early)	Satisfactory	Satisfactory	Low	Low
	Soft joint over 120° rotation	Good if shut-off function is still working correctly (and not shutting off too early)	Satisfactory if ratchet func- tion is still working correctly	Satisfactory	Low	Low
	Soft joint over 120° rotation on self-tapping screw	Good if shut-off function is still working correctly (and not shutting off too early)	Satisfactory if ratchet func- tion is still working correctly	Low	Low	Low
	Soft joint over 120° rotation on prevailing torque (wood) screw	Good if shut-off function is still working correctly (and not shutting off too early)	Satisfactory if ratchet func- tion is still working correctly	Low	Low if screw is still being turned	Low

# Torque Guide for Various Grades & Sizes of Metric Fasteners

This chart is a guide for determining maximum fastening torque (in Nm) for various grades and sizes of metric fasteners. The assumed screw head friction is  $\mu_{ges} = 0.12$ , as calculated from the tensile cross-section of the listed fastener. This chart is only a recommendation based on industry standards; actual use and application of a torque value to a fastener may vary based on application.

**Metric Screw Strength Grades**

Standard Metric Screw Sizes	5.8	6.8	6.9	8.8	10.9	12.9	14.9
M 1	0.0239	0.0287	0.0322	0.0382	0.0539	0.0646	0.0755

# Driver Selection Based on Fastener Size & Recommended Torque

## Legend

### 1 - Screw Class / Torque Range

This chart provides an overview of the recommended torques for popular metric fasteners. The recommended torque for fastener classes 8.8 & 6.6 refers to untreated, oil coated screws with a friction coefficient of 0.125. Torque values correspond to approximately 62% of the fastener yield point. Torque values are for hard joints only; soft joint values will be lower.

### 2 - High Accuracy/ Repeatability

Drivers in this range are ideal for hard or soft joints with high torque accuracy & repeatability demands. These drivers tend to have an upper torque limit due to reaction torque effect on the user at higher settings. **Advantages:** Very accurate, low-noise, low wear, long service life, very little operator influence on torque.

### 3 - High Accuracy/ Repeatability

Drivers in this range are ideal for hard or soft joints with high torque accuracy & repeatability demands. **Advantages:** Very accurate, low-noise, low wear, long service life, very little operator influence on torque.

### 4 - Good Accuracy/ Repeatability

Drivers in this range are good for hard or soft joints with medium torque accuracy & repeatability demands, such as self-tapping or wood fastener applications. These drivers tend to have an upper torque limit due to reaction torque effect on the user at higher settings. **Advantages:** Accurate, low-noise, low wear, long service life, little operator influence on torque.

### 5 - Good Accuracy/High Speed

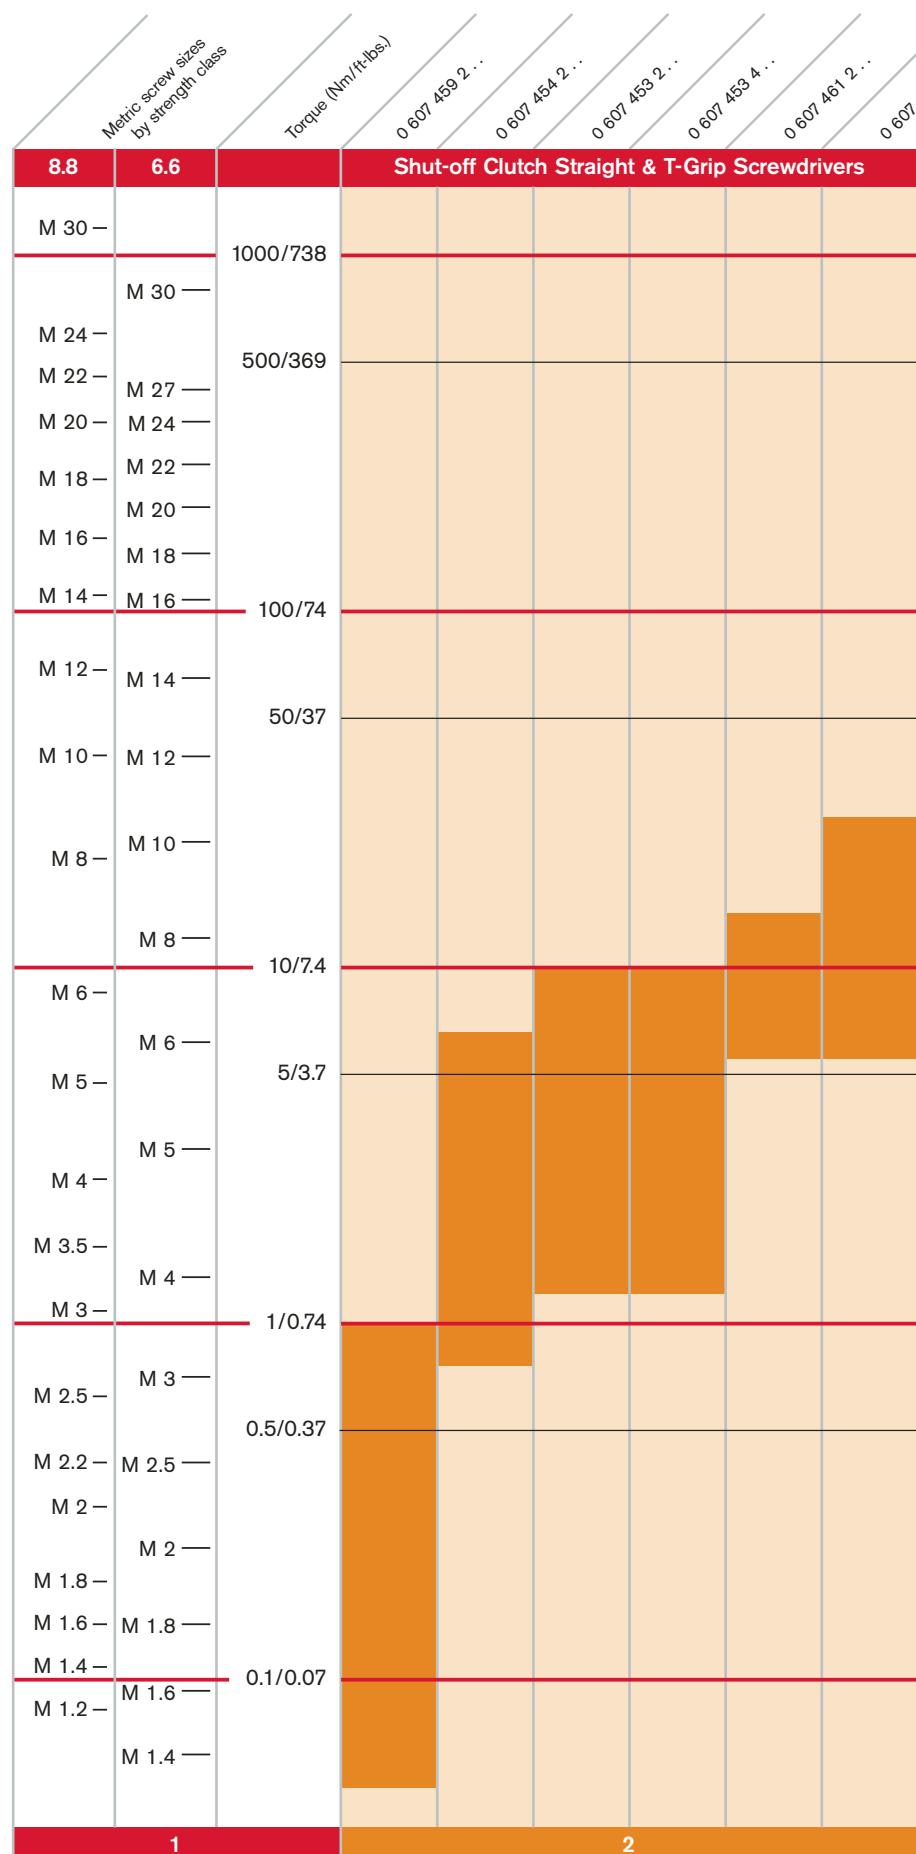

Impulse drivers in this range are good for hard joints requiring medium torque accuracy & repeatability, but high speed. Very low torque reaction, low in noise and wear.

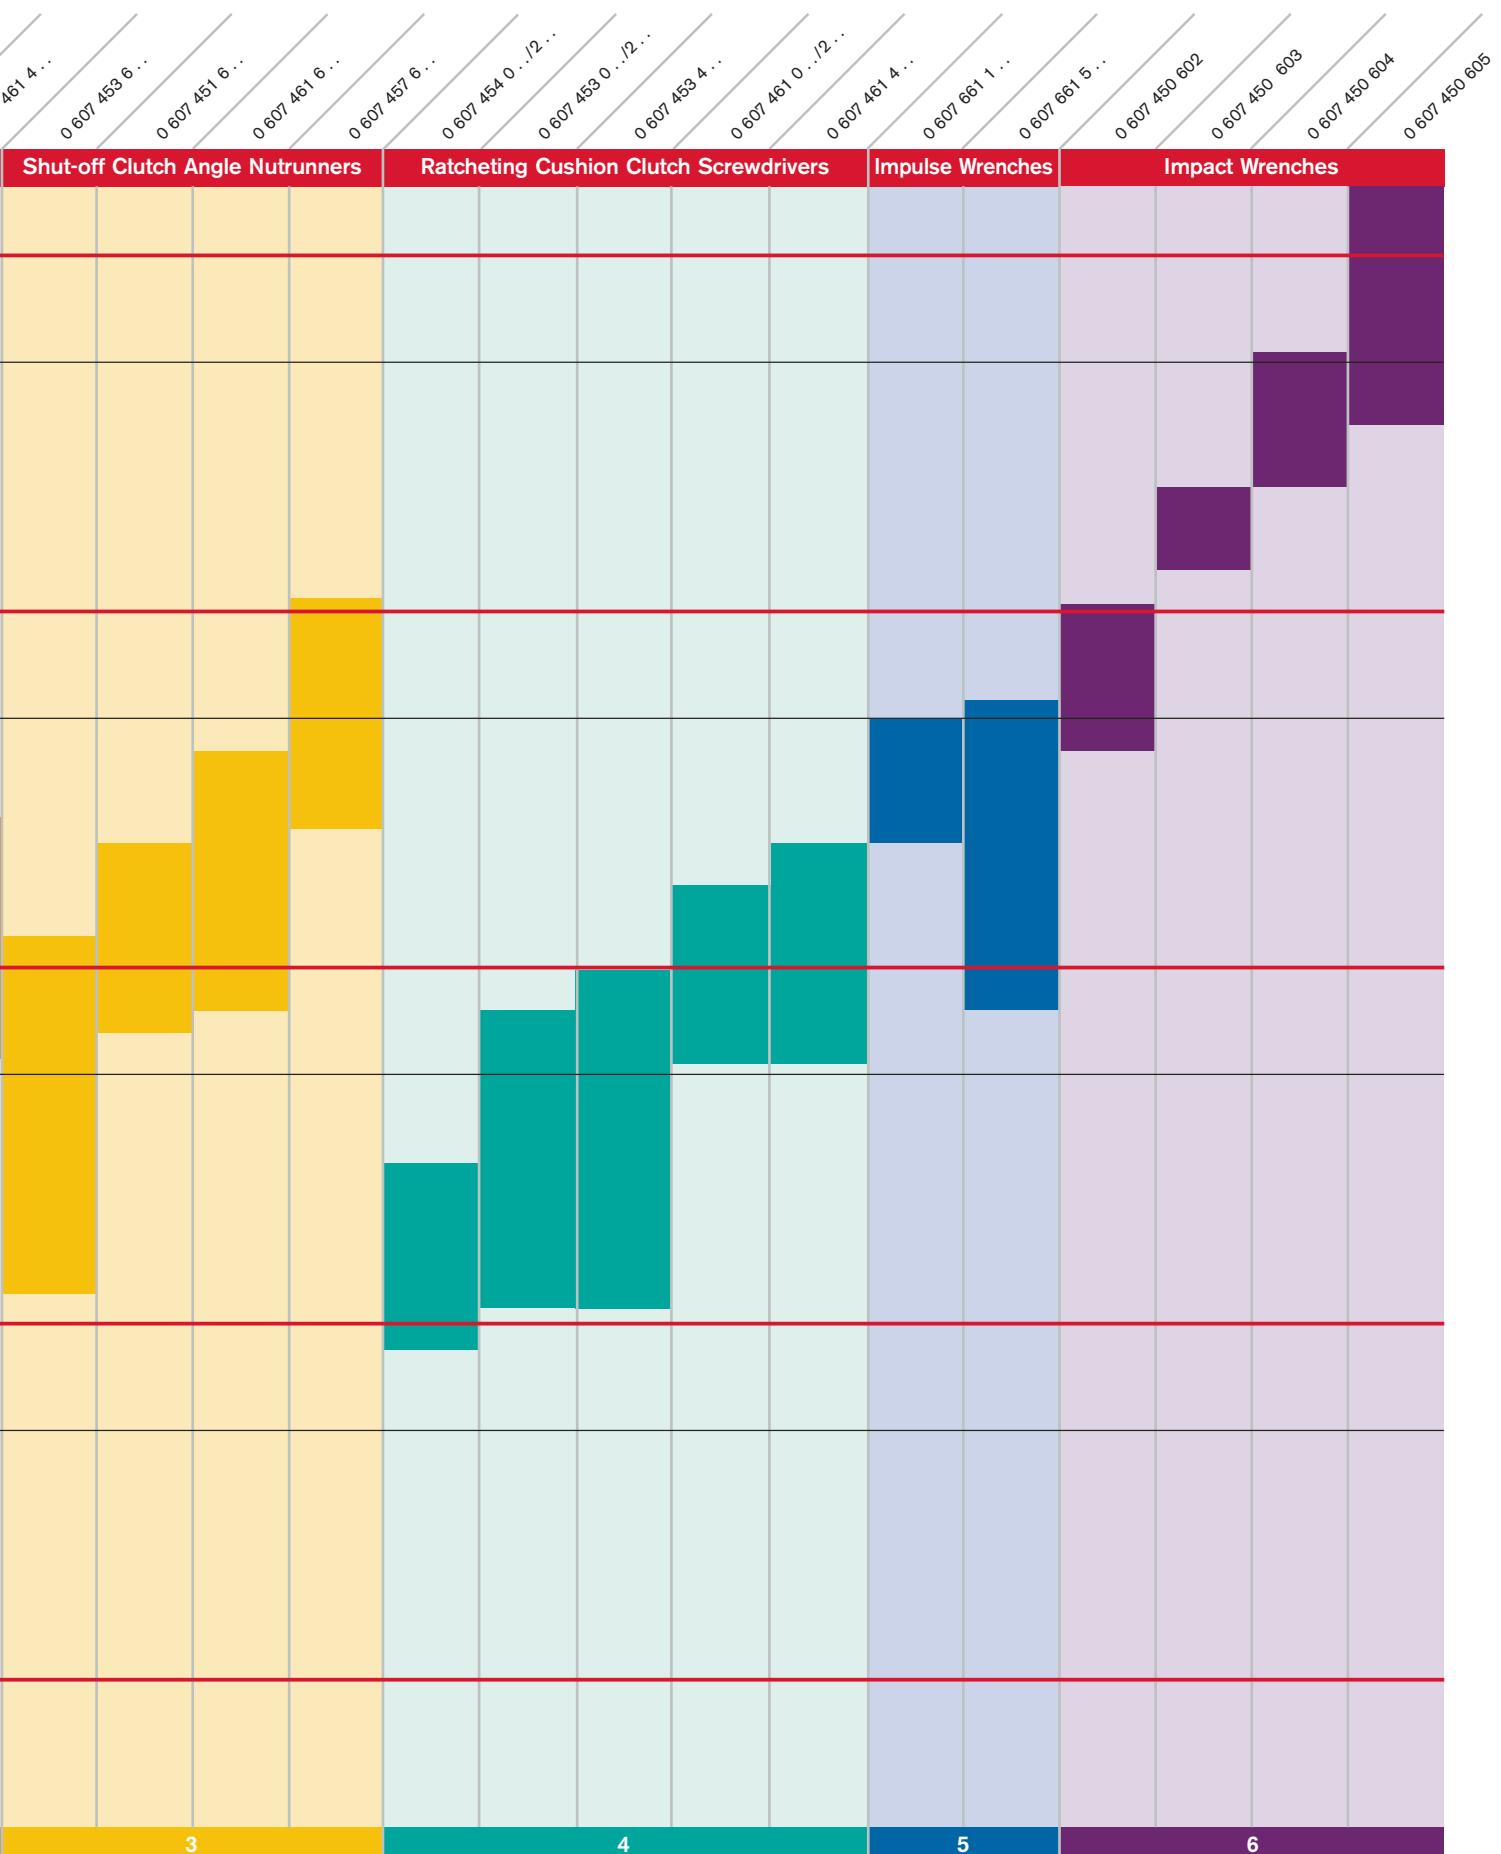

**Advantages:** Fast, accurate, low noise, low wear; shut off models have little operator influence on torque.

### 6 - High Torque/High Speed

For hard joints on large fasteners requiring lower torque accuracy and high speed. Very low torque reaction without upper torque limit (no shut-off function).

**Advantages:** Fast.

## with CLEAN Oil-free 20–120 Watt Motors

### 20 Watt Pencil-Style Straight Screwdrivers

- Ideal for micro-electronics, eyewear, and other small assemblies
- C-L-E-A-N motor technology reduces noise & air consumption and eliminates the need for oil
- Clean room certified air motor
- Integrated screw vacuum system when used with optional guide sleeve (see accessory pages 36-37)
- Optional exhaust air hose
- Lightweight, break-resistant polyamide housing
- Locking reverse button

### 120 Watt Straight Screwdrivers

- C-L-E-A-N motor technology reduces noise & air consumption and eliminates the need for oil
- Clutch torque adjustment does not require bit removal
- Precision shut-off clutch allows very fine torque adjustment and minimal torque deviation
- Broad torque range – 0.8 to 7 Nm (7 to 62 in-lbs).
- S-Plus clutch combines the features of a shut-off and cushion clutch
- Higher torque in reverse aids in fastener removal
- Available custom clutch housing mates screwdriver to automatic screw-feed systems (non-Bosch item). Refer to accessory page 38 for information.
- Locking reverse button

All motor power & torque data in this catalog assumes an air pressure of 6.3 bar/91psi exists at the tool inlet.  
Correct air pressure and volume should be verified at inlet with the tool running at no-load speed.

## with CLEAN Oil-free 180 Watt Motors or Standard 400 Watt Motors

### 180 Watt Straight Screwdrivers

- C-L-E-A-N motor technology reduces noise & air consumption and eliminates the need for oil
- Clutch torque adjustment does not require bit removal
- Precision shut-off clutch allows very fine torque adjustment and minimal torque deviation
- Broad torque range of 1.2 to 10 Nm (.88 to 7.4 ft-lbs.)
- S-Plus clutch combines the features of a shut-off and cushion clutch
- Higher torque in reverse aids in fastener removal
- Available custom clutch housing mates screwdriver to automatic screw-feed systems (non-Bosch item). Refer to accessory page 38 for information
- Locking reverse button

### 400 Watt Straight Screwdrivers

- Auxiliary side handle included
- Virtually unbreakable, cold insulating polyamide housing protects motor and provides maximum operator comfort
- Exhaust air hose optional
- Locking reverse button
- Available guide sleeve and cover on accessory page 40

#### Straight Screwdriver with Ratcheting Cushion Clutch

(Good accuracy, ideal for self-tapping screws)

180 Watt, 1/4 Hp Motor

#### Straight Screwdriver with Shut-off Clutch

(Best accuracy)

180 Watt, 1/4 Hp Motor

#### Straight Screwdriver with S-Plus Combination Clutch

(Best accuracy & best for self-tapping screws)

180 Watt, 1/4 Hp Motor

#### Straight Screwdriver with Ratcheting Cushion Clutch

(Good accuracy, ideal for self-tapping screws)

400 Watt, 0.54 Hp Motor

#### Straight Screwdriver with Shut-off Clutch

(Best accuracy)

400 Watt, 0.54 Hp Motor

#### Straight Screwdriver with S-Plus Combination Clutch

(Best accuracy & best for self-tapping screws)

400 Watt, 0.54 Hp Motor

All motor power & torque data in this catalog assumes an air pressure of 6.3 bar/91psi exists at the tool inlet. Correct air pressure and volume should be verified at inlet with the tool running at no-load speed.

## with CLEAN Oil-free 180 Watt Motors or Standard 370, 400, 740 Watt Motors

### 180/370 Watt Angle Nutrunners

- C-L-E-A-N motor technology reduces noise & air consumption and eliminates the need for oil (180W models only)
- External clutch torque adjustment
- Precision shut-off clutch allows very fine torque adjustment and minimal torque deviation
- Broad torque range – 1.5 to 30 Nm (1.1 to 22 ft-lbs).
- All 180W & 370W nutrunners use the same 5 angle heads as our cordless Angle EXACT models
- Precision angle head adjusts to 8 positions in 45° increments without shims or modification
- Locking reverse button

### 400–740 Watt Angle Nutrunners

- External clutch torque adjustment
- Precision shut-off clutch allows very fine torque adjustment and minimal torque deviation
- Broad torque range – 7 to 120 Nm (5 to 89 ft-lbs.)
- Precision angle head adjusts to 24 positions in 15° increments without shims or modification

Correct air pressure and volume should be verified at inlet with the tool running at no-load speed.

## with CLEAN Oil-free 180 Watt Motors or Standard 400 Watt Motors

### 180 Watt T-Grip Screwdrivers

- C-L-E-A-N motor technology reduces noise & air consumption and eliminates the need for oil
- Clutch torque adjustment does not require bit removal
- Precision shut-off clutch allows very fine torque adjustment and minimal torque deviation
- Broad torque range of 1.2 to 10 Nm (.88 to 7.4 ft-lbs.)
- Higher torque in reverse aids in fastener removal
- Top-mounted forward/reverse switch
- Available custom clutch housing mates screwdriver to automatic screw-feed systems (non-Bosch item). Refer to accessory pages for information

### 400 Watt Screwdriver

- Auxiliary side handle included
- Virtually unbreakable, cold insulating polyamide housing protects motor and provides maximum operator comfort
- Ergonomic T-Grip for optimal handling
- Exhaust air hose optional
- Low vibration
- All 400w drivers can use suspension hook 3 604 720 006 (pg. 38)

All motor power & torque data in this catalog assumes an air pressure of 6.3 bar/91psi exists at the tool inlet. Correct air pressure and volume should be verified at inlet with the tool running at no-load speed.

# Pistol-Grip Screwdrivers, T-Grip Screwdriver & Tappers

**with CLEAN Oil-free 180 Watt Motors  
or Standard 400 Watt Motors**

## 180 Watt Pistol Screwdrivers

- C-L-E-A-N motor technology reduces noise & air consumption and eliminates the need for oil
- Higher torque in reverse aids in tap removal
- Rocker-style trigger is forward/reverse switch

### Pistol Screwdriver/Tapper with Ratcheting Cushion Clutch

## Screwdriver & Tappers

- One hand forward/reverse operation
- Long life
- Excellent performance for many applications
- Cushion clutch model features adjustable torque range
- All 400w drivers can use suspension hook 3 604 720 006 (pg. 38)

All motor power & torque data in this catalog assumes an air pressure of 6.3 bar/91psi exists at the tool inlet. Correct air pressure and volume should be verified at inlet with the tool running at no-load speed.

## with CLEAN Oil-free 300 Watt Motors or Standard 400 Watt Motors

### 400 Watt Straight Impulse Wrench

- Auxiliary side handle included
- Vane-type pulse unit does not have shut-off function, but provides for fast oil changes (less than 15 minutes) without any special tools or vacuum devices
- Locking reverse button

Straight Impulse Wrench  
without Shut-off Function

400 Watt  
0.54 Hp Motor

### 300 Watt T-Grip Impulse Wrenches

- C·L·E·A·N motor technology reduces noise & air consumption and eliminates the need for oil
- Extremely lightweight impulse wrench
- Ergonomic, reinforced T-Grip polyamide housing for balanced center of gravity and optimal comfort
- Shut-off function reacts to mechanical centrifugal force
- Impulse unit features patented innovative piston compression design consisting of only three major parts. This design allows for quick oil changes (less than 15 minutes) without any special tools or vacuum devices, and prevents pulse unit heat buildup
- Higher torque in reverse aids in fastener removal
- Dual-position suspension hook can be mounted on top or at rear of tool

## 150–2200 Nm Torque Range

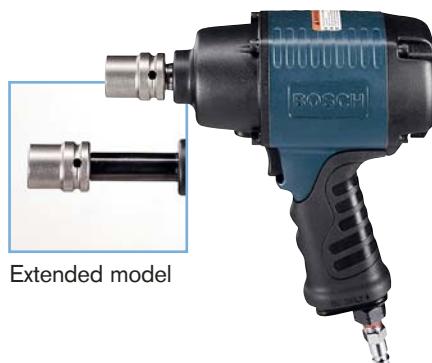

### Industrial Grade Impact Wrenches

- High speed for use in less critical fastening applications where precise torque values are not required
- Excellent performance/weight ratio
- High quality impact mechanisms ensure long service life
- Simple design; powerful double impact mechanism is made from high alloy materials
- Impact force can be reduced via built-in air limiting valve
- Magnesium housing reduces tool weight
- Magnesium housing models feature friction ring drive

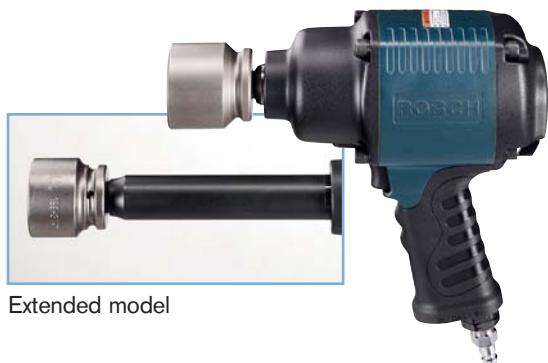

**3/8" Pistol Impact Wrench**

**1/2" Pistol Impact Wrench**

**3/4" Pistol Impact Wrench**

**1" D-Handle Impact Wrench**

Tool part number  
0 607 450 614

Recommended screw diameter @ grade 8.8  
M 14

\*Recommended Torque (Nm)  
150

110

Tool part number	Recommended screw diameter @ grade 8.8	*Recommended Torque (Nm)	*Recommended Torque (Nm)
0 607 450 614	M 14	150	110

0 607 450 615	M 18	350	258

For Loads from 0.3 to 17 kg  
(0.7 to 37.5 lbs)

## Balancers

- Sturdy metal safety holder includes snap hook
- Balancers feature a high quality distribution valve and safety clutch for even, smooth cable action
- Spring breakage protection on balancers with a load capacity greater than 3 kg / 6.6 lbs.
- Cable changes do not require spring removal
- Balancer dimensions are on page 51

# 20 Watt Pencil-Style Straight Screwdriver Accessories

## 20 watt bits and guide sleeves for use with integrated screw vacuum retaining system

3 mm hex drive shank

3 mm hex drive shank

3 mm hex drive shank

3 mm hex drive shank

Part number

Features & Comments

**Flat blade screwdriver bit, 3 mm drive shank, 0.5 thick x 3 mm wide blade**

3 608 520 001

**Bit and Vacuum System Operation**

All bits listed on this page can be used with or without the integrated screw vacuum feature on the 20 watt pencil screwdriver.

**Flat blade screwdriver bit, 3 mm drive shank, 0.6 thick x 4 mm wide blade**

3 608 520 002

Bits are inserted into the driver by removing the collet cover (in direction of arrow on cover) and unscrewing the collet nut. The bit is secured after insertion by tightening the collet nut.

**Flat blade screwdriver bit, 3 mm drive shank, 0.8 thick x 5 mm wide blade**

3 608 520 003

When screw vacuum is desired, a guide sleeve and sleeve holding spring must be used to cover the bit; the guide sleeve (shown below) is sold separately. The sleeve holding spring is included with the screwdriver.

**Phillips head screwdriver bit, 3 mm drive shank, #0 (zero) tip size**

3 608 520 004

Guide sleeves are shipped unfinished; the bore of the sleeve is drilled but the tip must be machined to fit each desired screw application by a qualified machine shop.

**Phillips head screwdriver bit, 3 mm drive shank, #1 (one) tip size**

3 608 520 005

Screw vacuum level is adjusted on the back of the driver and can be disabled if desired. The guide sleeve directs vacuum to the tip of the bit; the guide sleeve spring allows the sleeve to retract into the tool as the screw is fastened.

**Pozidrive head screwdriver bit, 3 mm drive shank, #0 (zero) tip size**

3 608 520 006

Vacuum system can be used with screw sorting sheets (below) to increase fastening efficiency.

**Pozidrive head screwdriver bit, 3 mm drive shank, #1 (one) tip size**

3 608 520 007

Vacuum system can be used with holding fixture (opposite page) to prevent dirt from clogging screwdriver when not in use. The holder is a simple valve and cup; when the tool is placed in the cup, the valve shuts off all feed air from the tool, disabling the vacuum system and motor.

**Torx head screwdriver bit, 3 mm drive shank, size T5**

3 609 202 738

The Bosch bits listed on this page are the only bits which work with the vacuum retaining system. All other commercial bits are too thick to function with the guide sleeve. A 1/4" adapter is available (see opposite page) for use with commercial bits.

**Torx head screwdriver bit, 3 mm drive shank, size T6**

3 609 202 739

Required for integrated screw vacuum retaining system. See above text for functional details.

**Torx head screwdriver bit, 3 mm drive shank, size T7**

3 609 202 740

**Torx head screwdriver bit, 3 mm drive shank, size T8**

3 609 202 741

**Torx head screwdriver bit, 3 mm drive shank, size T9**

3 609 202 742

**Torx head screwdriver bit, 3 mm drive shank, size T10**

3 609 202 743

**Guide sleeve, blank (unfinished)  
for all bits listed on this page**

3 600 723 001

## Screw sorting sheets for use with integrated screw vacuum retaining system

**Perforated screw sorting sheet  
for M1.6/M2 screws**

1 609 202 846

The user loads screws for vacuum pickup by placing a handful of screws on a sheet and gently shaking it until the shanks of all the screws drop into the slots of the sheet.

**Perforated screw sorting sheet  
for M2.5 screws**

1 609 202 847

With the guide sleeve installed on the tip of the pencil screwdriver, individual screws can be retained without the use of hands. (Plastic bin shown is not a Bosch item)

**Perforated screw sorting sheet  
for M3 screws**

1 609 202 848

**Pencil screwdriver holding fixture  
for use with integrated screw vacuum retaining system**

Part number

Features & Comments

**Pencil driver holding fixture with built-in air supply shut off valve (prevents dirt & dust from clogging tool vacuum system)**

1 609 202 845

Prevents dirt & dust from clogging tool vacuum system. Valve is installed in series into supply air line.

The holder is a simple valve and cup; when the tool is placed in the cup, the valve shuts off the air supply to the tool, disabling the vacuum system and motor.

**Universal bit holder  
NOT for use with integrated screw vacuum retaining system**

1/4" chuck

3 mm hex drive shank

**Universal bit holder, 3 mm drive to 1/4"  
quick-change chuck**

3 609 202 751

NOT for use with screw vacuum system  
Accepts all standard 1/4" bits

# Accessories for Screwdrivers, Nutrunners, Tappers, Drills & Grinders

## Clutch Springs for all models of 120-180 Watt Shut-off Clutches

		Part number	Features & Comments
<b>White clutch spring</b> Torque range 0.5–2.5 Nm	3 604 618 003		Optional for all drivers (not included as standard spring for any 120 to 180 watt driver.) Used for lowest torque applications.
<b>Yellow clutch spring</b> Torque range 1.2–8 Nm	3 604 619 003		Standard spring included with most 120 to 180 watt drivers. Used for medium torque applications within product range.
<b>Blue clutch spring</b> Torque range 1.2–15 Nm	3 604 619 020		Optional for all drivers, standard for some models. Used for maximum torque applications within product range. Refer to product pages for standard spring applications

## Screw Feeder Clutch Housings for all 120-180 Watt Straight & T-Grip Drivers

	<b>Clutch housing for 120W - 0.16 Hp Straight &amp; T-Grip drivers</b>	3 605 125 058	Mates Bosch driver to automatic screw feed systems (non-Bosch item) Standard clutch housing is removed & replaced by this item
	<b>Clutch housing for 180W - 0.25 Hp Straight &amp; T-Grip drivers</b>	3 605 125 057	Mates Bosch driver to automatic screw feed systems (non-Bosch item) Standard clutch housing is removed & replaced by this item

## Accessory Handles & Sleeves

<b>Rubberized grip sleeve for all 120 watt straight drivers</b>	3 600 499 002	Slides over screwdriver housing to provide better grip and prevent tool from spinning in operators hand
<b>Rubberized grip sleeve for all 180 watt straight drivers</b>	3 600 499 001	Slides over screwdriver housing to provide better grip and prevent tool from spinning in operators hand
<b>Standard side handle with wing nut clamp for all 400 watt straight drivers</b>	3 602 025 009	Handle clamp diameter is 46 millimeters. This handle is included with some drills & drivers
<b>Integrated rear handle for 120 watt straight drivers</b>	3 607 031 352	Converts straight driver to pistol-type. Slides over center of tool
<b>Integrated rear handle for 180 watt straight drivers</b>	3 607 031 351	Converts straight driver to pistol-type. Slides over center of tool
<b>Heavy-duty side handle for all 400 watt straight &amp; T-grip drivers &amp; drills</b>	1 602 025 022	Handle requires use of 3 608 040 002 clamp (shown below)
<b>48 mm Heavy-duty clamp for use with heavy-duty side handles</b>	3 608 040 002	Clamp is required for heavy duty handles

## Center Mount Suspension Hooks for Drills, Drivers & Nutrunners

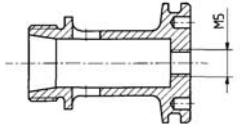

<b>Center mount suspension hook for 180 watt angle nutrunners</b>	3 601 310 016	Connects tool to balancer cable; allows tool to hang horizontally.
<b>Center mount suspension hook for 370 watt angle nutrunners</b>	2 601 310 002	Connects tool to balancer cable; allows tool to hang horizontally.
<b>Center mount suspension hook for 400 watt drills, drivers &amp; angle nutrunners</b>	3 604 720 006	Connects tool to balancer cable; allows tool to hang horizontally.

Suspension Hooks & Grease Gun for Impact Wrenches

	Part number	Features & Comments
	3 609 201 495	Connects tool to balancer cable; allows tool to hang horizontally.
	3 609 201 494	Connects tool to balancer cable; allows tool to hang vertically.
	3 609 202 280	Connects tool to balancer cable; allows tool to hang vertically.
	3 609 202 147	Connects tool to balancer cable; allows tool to hang horizontally.
	3 609 202 133	Lubricates impact pin mechanism

Exhaust Hoses, Mufflers & Port Adapters for All Production Tools

	Part number	Features & Comments
	3 600 712 008	Fits decentralized exhaust of 20 watt pencil-style screwdriver
	3 607 000 064	Central hose fits all 120/180 watt screwdrivers and grinders 0 607 254 100, ...101
	3 607 000 083	Fits decentralized exhaust of 120/180 watt drivers with plastic rear housing (all models)
	3 607 000 027	Central hose fits all 370/400 watt straight screwdrivers, drills 0 607 161 100, 101, 102, 103 and grinders 0 607 261 101, 102
	3 607 000 011	Central hose fits all 400 watt T-grip drivers, drills 0 607 161 500-507 and grinders 0 607 254 100, 101
	3 607 030 024	Decentralized hose fits all 400 watt straight screwdrivers, drills 0 607 161 100, 101, 102, 103 and grinders 0 607 261 101, 102
	3 607 000 000	Plastic muffler
	3 609 202 745	Fits models 0 607 661 505-510 and 0 607 453 429-443 Converts port to M5 thread
	3 609 202 746	Fits models 0 607 461 405, 406, 408 Converts port to M5 thread
	3 609 202 791	Fits models 0 607 461 403, 404, 409 Converts port to M5 thread

# Accessories for Screwdrivers, Tappers, Drills & Grinders

## Tapper Accessories

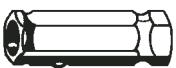

**Two-jaw tapper flex chuck  
with 7/16" shank**

Part number

3 608 573 000

Features & Comments

Includes square drive chuck key  
1 607 950 002 listed below

**Rigid short tap chuck with 7/16" shank  
4.95 mm / 0.195 in. square drive**

3 608 502 000

**Rigid short tap chuck with 7/16" shank  
5.55 mm / 0.219 in. square drive**

3 608 502 001

## 400 Watt Straight & T-Grip Screwdriver Guide Sleeve / Accessories

Fits all models with 1/4" quick-change chuck

**Guide sleeve**

3 600 329 000

Prevents screw head from sliding off bit during fastening; requires clutch cover end cap, spring and serrated cap nut listed below.

**Clutch cover end cap**

3 600 508 014

Screws onto existing cover on tool. Used with 3 600 329 000 guide sleeve (above).

**Compression spring**

3 604 615 000

Inserts into clutch cover (above), keeps guide sleeve 3 600 329 000 extended around bit.

**Serrated cap nut**

3 603 313 002

Threads onto end cap 3 600 508 014 for use with guide sleeve 3 600 329 000.

## Miscellaneous Accessories

**Angle Head Protective Rubber Cover**

3 605 500 171

Fits all Angle head models except Heavy-duty head 0 607 451 618

**Quick-Change Chuck  
Rubber Cover Sleeve**

3 605 500 172

For all 1/4" quick change chucks

**Straight Head for All 180/370 Watt  
Angle Nutrunners**

0 607 453 631

Fits all 180/370 watt Air Nutrunners and all cordless angle EXACT models
